

**SY6288****Low Loss Power Distribution Switch
Preliminary Spec**

General Description

SY6288 is an ultra-low Rds(on) switches with current limiting function to protect the power source from over current and short circuit conditions.

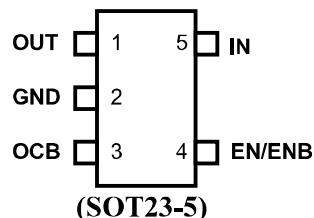

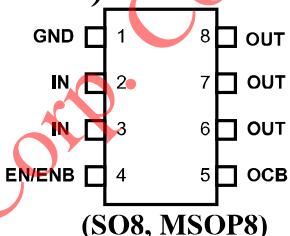

Ordering Information

Features

- Distribution voltages: 2.5V to 5.5V
- Over temperature shutdown and automatic retry
- Reverse blocking (no body diode)
- At shutdown, OUT can be forced higher than IN
- Fault flag (OCB) output under over current and fault conditions
- Automatic output discharge at shutdown
- Built-in softstart
- 0.4ms rise time
- RoHS Compliant and Halogen Free
- Four different enable logics
 - SY6288A: Active High/0.6A
 - SY6288B: Active Low/0.6A
 - SY6288C: Active High/1.5A
 - SY6288D: Active Low/1.5A
- Compact packages minimize the board space:
SOT23-5, SO8, MSOP8

Pin Name	Pin Number (SO8, MSOP8)	Pin number (SOT23-5)	Pin Description
IN	2,3	5	Input pin
GND	1	2	Ground pin
OUT	6,7,8	1	Output pin

**SY6288**

EN- SY6288A/C	4	4	ON/OFF control. Don't leave it floating. EN: high enable. ENB: low enable.
OCB	5	3	Open Drain Fault Flag

Absolute Maximum Ratings (Note 1)

All pins	6V
Power Dissipation, $P_D @ T_A = 25^\circ\text{C}$ SOT23-5/MSOP8/SO8	0.4/0.5/0.65W
Package Thermal Resistance (Note 2)	
θ_{JA}	250/150/90°C/W
θ_{JC}	130/ 65/ 45°C/W
Junction Temperature Range	150°C
Lead Temperature (Soldering, 10 sec.)	260°C
Storage Temperature Range	-65°C to 150°C
ESD Susceptibility (Note 2)	
HBM (Human Body Mode)	2kV
MM (Machine Mode)	200V

Recommended Operating Conditions (Note 3)

IN	2.5V to 5.5V
All other pins	0-5.5V
Junction Temperature Range	-40°C to 125°C
Ambient Temperature Range	-40°C to 85°C

Electrical Characteristics

(VIN = 5V, CL=1uF, per channel, TA = 25°C unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Input Voltage Range	VIN		2.5		5.5	V
Shutdown Input Current	I _{SHDN}	Rload=open, switch off		0.1	1	µA
Quiescent Supply Current	I _Q	Rload=open, switch on		25		µA
FET RON	R _{ds(on)1}			90		mΩ
Current Limit	I _{LIM}	SY6288C, SY6288D	2			A
		SY6288A, SY6288B	1			A
EN/ $\overline{\text{EN}}$ threshold	Logic-Low Voltage	V _{IL}	V _{IN} =2.5V to 5.5V		0.8	V
	Logic-High Voltage	V _{IH}	V _{IN} =2.5V to 5.5V	2		V
IN UVLO threshold	V _{IN,UVLO}				2.4	V
IN UVLO hysteresis	V _{IN,HYS}			0.1		V
Turn-ON time	TON	RL=5ohm		400		µs
Turn-OFF time	TOFF				200	µs
OCB low resistance	R _{OCB}			20		Ω
OUT shutdown discharge resistance	R _{DIS}			75		Ω
Thermal Shutdown Temperature	T _{SD}			150		°C
Thermal Shutdown Hysteresis				20		°C

Note 1: Stresses listed as the above “Absolute Maximum Ratings” may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.

Note 2: θ_{JA} is measured in the natural convection at $TA = 25^{\circ}\text{C}$ on a low effective single layer thermal conductivity test board of JEDEC 51-3 thermal measurement standard.

Note 3: The device is not guaranteed to function outside its operating conditions.

Operation

Over-current protection

When the over-current condition is sensed, the gate of the pass switch (PFET in this case) is modulated to achieve constant output current. Under output short circuit conditions, the normal current limit should be folded back 50%. If the over current condition exists for a long enough time, the junction temperature may exceed 150°C . the over-temperature protection will shut down the part. Once the chip temperature cooled down to 130°C , the part will restart.

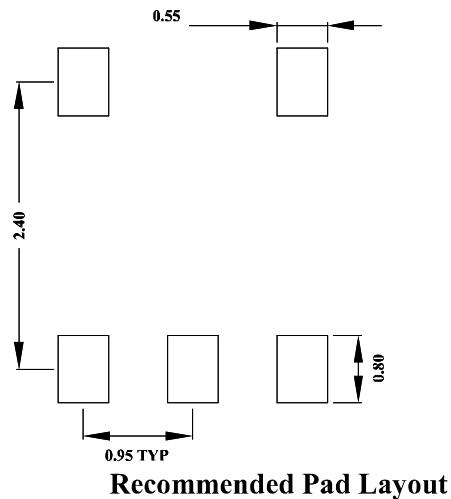

Fault Flag (OCB)

The OCB output is asserted (active low) when an overcurrent or overtemperature shutdown condition is encountered after a 10-ms deglitch timeout. The output remains asserted until the overcurrent or overtemperature condition is removed. Connecting a heavy capacitive load to an enabled device can cause a momentary overcurrent condition; however, no false reporting on OCB occurs due to the 10-ms deglitch circuit. OCB is not deglitched when the switch is turned OFF due to an overtemperature shutdown.

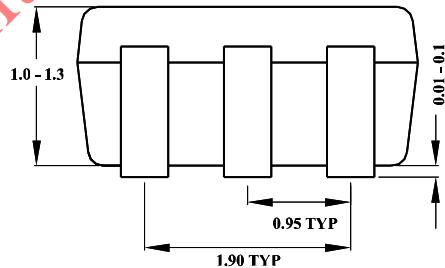

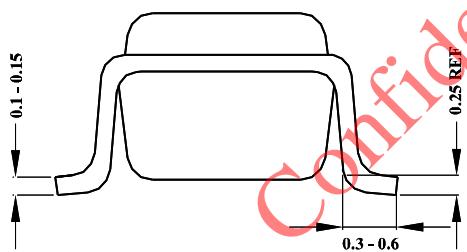

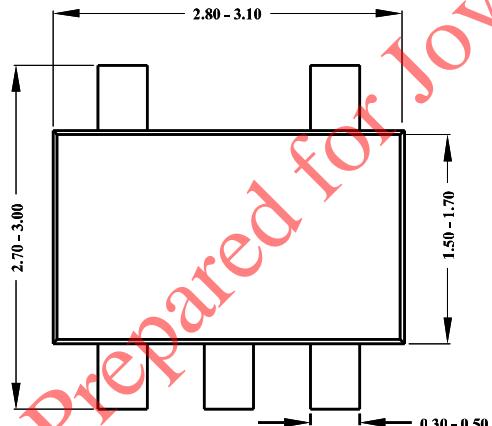

SY6288

SOT23-5 Package outline & PCB layout design

Recommended Pad Layout

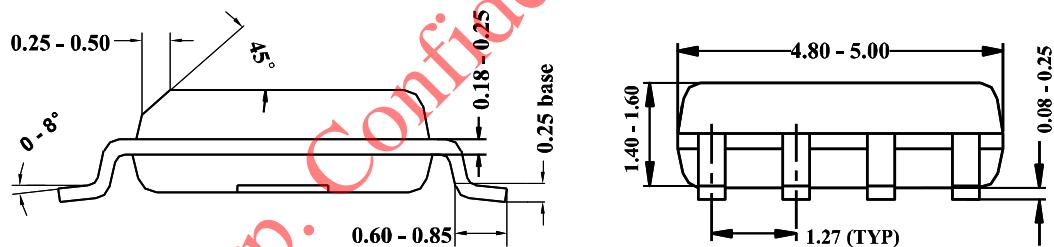

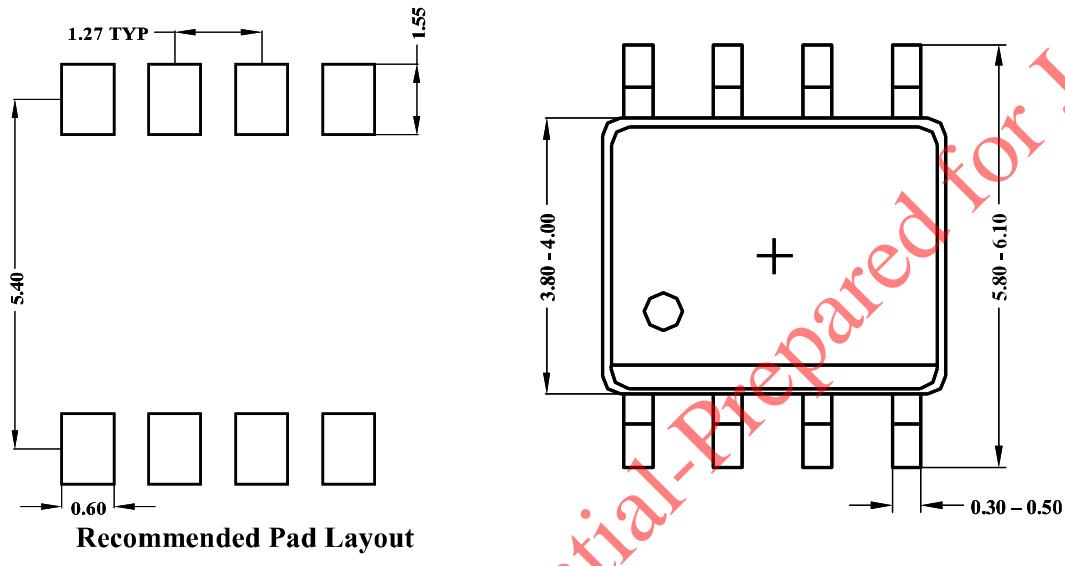

Notes: All dimensions are in millimeters.

All dimensions don't include mold flash & metal burr.

SY6288

SO8 Package outline & PCB layout design

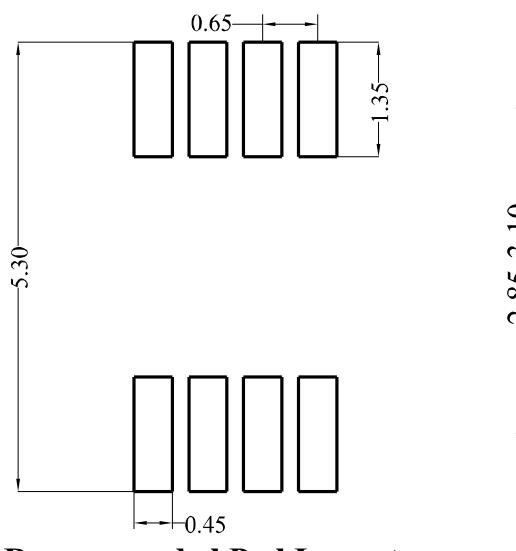

Notes: All dimensions are in millimeters.

All dimensions don't include mold flash & metal burr.

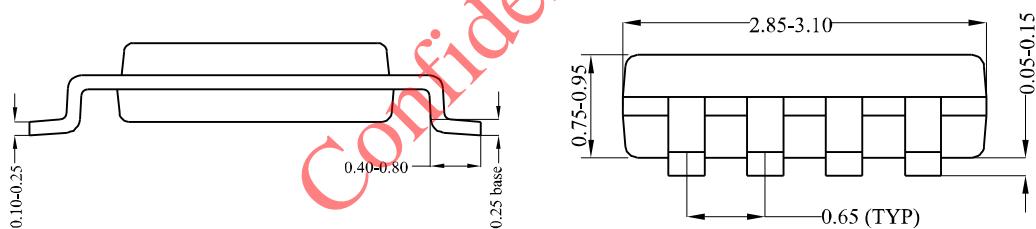

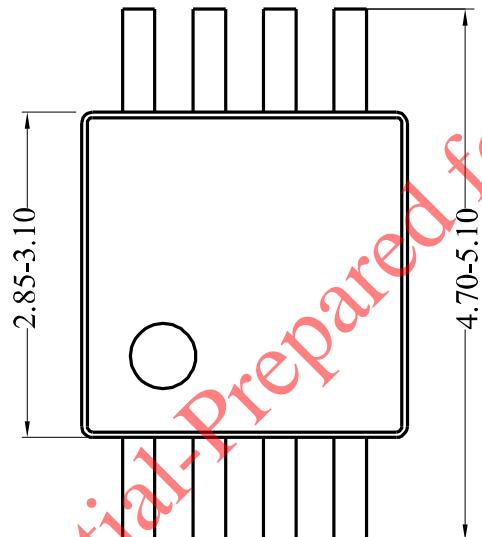

SY6288

MSOP8 Package outline & PCB layout design

Recommended Pad Layout

Notes: All dimensions are in millimeters.

All dimensions BSI don't include mold flash & metal burr.
